By An Xiao Mina and Jan Chipchase

24

Electric avenue

China's past attempts to get into the car industry failed. But EVs offer a new path.

By Jordyn Dahl

28

The chip leap forward

Hopes for a homegrown chip industry get a major boost from artificial intelligence.

By Will Knight

36

Nation building

How China became the world's most prolific maker of artificial islands.

By Vince Beiser

42

Nuclear death watch

The energy source's biggest booster now has its doubts.

By Peter Fairley

46

China vs. the US: Who wins and who loses

A Q&A with Yasheng Huang, author of *Capitalism with Chinese Characteristics*.

By Will Knight

48

Dreams of a global grid

Are next-generation power lines a clean-energy play or a global power move?

By James Temple

52

The rockets' red glare

The country hopes a cohort of startups can vault it into the lead in space.

By Joan Johnson-Freese

56

The father of quantum

Advances in communications could remake industry and change how wars are fought.

By Martin Giles

62

Crossing the germline

Three years ago an unknown scientist caused a furor by editing human embryos. It was a step on an inexorable path to designer babies.

By Antonio Regalado

70

The Caltech of China

The country promotes scientific advances for the greater good. But who determines what the greater good is?

By Yangyang Cheng

76

A payment apps paradise

Fintech has transformed China. Here's why it won't do the same in the West.

By Martin Chorzempa

78

Locked out of the Chinese room

How China took on Google, and won.

By Matt Sheehan

88

The Reunion

Sci-fi: Technology is making people unhinged and violent. Can an algorithm stop them?

By Chen Qifan

96

Cold comfort

Calling the US-China rivalry a cold war is convenient and familiar, but wrong.

By Graham Webster
